Work Experience	
KcsIt – COFCO International – Back End Developer	
Period:	12/2023 - Moment
Description:	Api Rest used as an intermediary means of communication between numerous applications. Detail roles: - Create APIs for managing base tables - Using reflection to create dynamic predicates / Where conditions - Using principles of solid
Technologies:	.NET Core 8.0, SQL, LINQ, Polly, CI/CD, Git, Azure / Devops, Scrum, Service Bus, Redis, Mediator, S3 bucket, SQS, Mediator
KcsIt – Worten – Back End Developer	
Period:	09/2022 - 11/2023
Description:	Api Rest used as an intermediary means of communication between numerous applications and SAP. Its main features are:

	- Send information to SAP APIS - Send information to Wosa APIS - Get information from another system and create a new file with information to send to SAP or WOSA. - Management status of a process - Use Polly to create communication more resilient - Creating Terraform files to create hardware, policies and permissions in Amazon Tests: XUnit, Jmeter, Specflow Amazon Products: Systems Manager, Amazon SQS, AWS Lambda, Amazon S3
Technologies:	.NET Core 6.0, Mediator, CQRS, FluentValidation, Entity Framework, Polly, Dapper, Amazon/Aws, CI/CD, Git, Scrum, TerraForms

KcsIt – Sonae Finance – Cloud Architect	
Period:	09/2021 – 09/2022
Description:	• Translate business information into requirements. • Design the solution to development team implementation;
Technologies:	Azure Devops; Scrum; Redis; Service Bus; Application Insights; Api Management;

DevScope - Sonae MC – LoyaltyManager – Back End Developer	
Period:	09/2019 – 09/2021
Description:	Api Rest used as an intermediary means of communication with numerous applications in the Sonae world. Its main features are: • Management of associations by the Continente card; • Management of payment checkouts; • Return of vouchers by mainland card; • Management of parks/payments through the mainland card; • Orchestration of services through dynamic configurations; • Scheduling and execution of processes with the possibility of being in batch; • Integrate partner transactions through files; Leader of the development team, of a small team, with the following main tasks: • Code Review of critical functionalities; • Technical and Functional Analysis of new features with an architect; • Planning and Review scenarios of integration tests; Development the policies resilience with Polly.
Technologies:	.NET Core 3.0, SQL Server, Mediator, Polly, CQRS, Entity Framework, Azure, NUnit, Jmeter, Seq, CI/CD, Git, Scum

DevScope - Sonae MC – SonaeLink – Full Stack Developer	
Period:	02/2019 - 08/2019
Description:	Sonae's communication platform with its suppliers, where they can consult all relevant information resulting from the commercial relationship between both parties. Conversion of specific modules existing in Sharepoint to C#, this includes: • Tool in windows forms to conversion existent information. • Create endpoint in exist api to respect the functionality. • Creation of a new screen for use by users in AngularJS.

	Development Tasks in HangFire to integration information with several systems (HelpDesk / CRM) Create new features in existent rest API. Development in Windows Forms of features: • Application to communicate SharePoint. • Tool to update data tables.
Technologies:	.NET MVC, AngularJS, Bootstrap, .NET SignalR, SQL Server, Entity Framework, Azure, Hangfire

DevScope - FCPorto – Scheduling – Full Stack Developer	
Period:	10/2018 - 02/2019
Description:	Platform for event planning divided by sports sections. Development in ASP.NET Core MVC of features: • Synchronized events to exchange Calendar. • Access to ADFS B2B and B2C. • CRUD of database tables. Development in Web API of features: • Send email. • Get the email template. Communicate to exchange.
Technologies:	ASP.NET Core MVC, MVC, LINQ, SQL Server, Angular, Bootstrap, HTML, jQuery, Code First, Data Base First, ADO, Entity Framework, Azure, Blob Storage

Activex – Full Stack Developer	
Period:	02/2015 - 09/2018
Description:	Development in MVC of modules for the company's CMS: • Order modules. • Invoice module. • Inventory management module. Development of applications to enable integration of the company's ERP Software: • Integration with license plate services (tips4y); • Web application to Automobile parts identification (TecDoc); • Integration with Bosch CORE. Developed webservice to integrate ERP with the entire network of ACP (Portuguese Auto Clube).offices Developed a web application in MVC capable of enabling a more evolved form of vehicle reception in the car repair shop, using only a mobile device (Tablet / Telephone) fully integrated with the existing billing system, thus causing a differentiating experience for the customer.
Technologies:	SQL Server, MVC, Code First, Rest, BootStrap, XUnit, Selenium

Infinauto – Full Stack Developer	
Period:	08/2008 – 01/2015
Description:	Developed in MVC an E-Commerce application, where the customer can view, track and order: • Products; • Current account status; • Orders placed; • Featured products;

	• News; • Technical documentation of auto parts; Developed in Windows Forms an application to read in ERP(PHC) and update E-Commerce: • Customers; • Products; • Families; • Current accounts; • Combined prices; • Invoices and sellers; Developed an intranet application in MVC capable of: • Control orders; • Control tasks and priorities; • Record / track visits from sellers to customers; • Create devolutions; • Bank transactions; • Generate PDF catalogs with various filters (price, families, brand, model, etc.);
Technologies:	SQL Server, MVC, Database First, Rest
